### **Touch-Read Filter (Wall Pad Version) Unveiled. Allows a Water Meter To Be Readable By Both A Touch-Read Pad And An AMI Radio Endpoint.**

St. Louis, Missouri  
07 July 2010.

SCADAmetrics is pleased to announce the addition of the **TRF-W** to its line of meter-reading accessories.

The TRF-W enables a water meter to be readable by both an AMI Radio Endpoint AND an Inductive Touch-Read Pad. Example AMI Radio Endpoints include (but are not limited to) the Neptune R900, the Itron ERT, and the Sensus MXU.

**Left: The TRF-W Provides Water Utilities With The Flexibility Of Reading Meters Using Either An AMI Radio Endpoint or a Touch-Read Pad.**

Having both Radio-Read and Touch-Read redundancy can be an invaluable benefit for utilities with indoor meter sets.

Additionally, a hybrid combination of Radio-Read and Touch-Read is often convenient for custody transfer meters when one utility has radio-read equipment, and the other is equipped with touch-readers.

When a Touch-Read Pad has been enhanced with the SCADAmetrics Touch-Read Filter, this redundancy is easily achieved.

The TRF-W, which enables this parallel connection, is inexpensive, compact, simple to install, and compatible with most wall-mounted Touch-Read Pads and encoder-based water meters.

The unit features gold-plated contacts and a weather-resistant silicone coating for reliable operation within even the harshest outdoor environments.

### **ABOUT SCADAmetrics –**

SCADAmetrics is the manufacturer of the EtherMeter™ SCADA/Meter Gateway – the device that enables Telemetry and SCADA System Integrators to read municipal and industrial meters using MODBUS® and Rockwell Automation industrial protocols.
